1 2 CLAIMS: 3 What is claimed is: 1 1. A method for directing a recipient of an e-mail to a 2 web site, the method comprising: 3 creating an e-mail with an embedded link, wherein the embedded link comprises a link to a redirect server 4 and link attributes that allow the redirect server to 5 determine a current web site associated with the embedded 6 7 link; 8 sending the e-mail to a recipient; 9 receiving the e-mail at the recipient's data 10 processing system; 11 responsive to the recipient selecting the embedded 12 link, sending link attributes from the recipient's data 13 processing system to the redirect server; 14 receiving the link attributes at the redirect 15 server; 16 determining, at the redirect server, the universal 17 resource locator for the current web site associated with 18 the embedded link; 19 sending the universal resource locator from the 20 redirect server to the recipient; and 21 retrieving, at the recipient's data processing

system, the contents from the current web site utilizing

the universal resource locator received from the redirect

22

23

24

server.

- 1 2. The method as recited in claim 1, wherein link
- 2 attributes and associated universal resource locators
- 3 corresponding to the link attributes are contained in a
- 4 link attribute properties file which may be accessed by a
- 5 redirect server to determine the universal resource
- 6 locator for the web site associated with the link
- 7 attributes received from the recipient.
- 1 3. The method as recited in claim 2, wherein the link
- 2 attribute properties file may be updated to contain the
- 3 most recent universal resource locators as necessary.
- 1 4. The method as recited in claim 2, wherein the link
- 2 attributes comprise a key and the link attribute
- 3 properties file contains key/universal resource locator
- 4 pairs allowing the redirect server to search a key and
- 5 retrieve an appropriate corresponding universal resource
- 6 locator.
- 1 5. A computer program product in computer readable
- 2 media for use in data processing systems for directing a
- 3 recipient of an e-mail to a web site, the computer
- 4 program product comprising:
- first instructions for creating an e-mail with an
- 6 embedded link, wherein the embedded link comprises a link
- 7 to a redirect server and link attributes that allow the
- 8 redirect server to determine a current web site
- 9 associated with the embedded link;

- second instructions for sending the e-mail to a
- 11 recipient;
- third instructions for receiving the e-mail at the
- 13 recipient's data processing system;
- 14 fourth instructions, responsive to the recipient
- 15 selecting the embedded link, for sending link attributes
- 16 from the recipient's data processing system to the
- 17 redirect server;
- 18 fifth instructions for receiving the link attributes
- 19 at the redirect server;
- sixth instructions for determining, at the redirect
- 21 server, the universal resource locator for the current
- 22 web site associated with the embedded link;
- seventh instructions for sending the universal
- 24 resource locator from the redirect server to the
- 25 recipient; and
- eighth instructions for retrieving, at the
- 27 recipient's data processing system, the contents from the
- 28 current web site utilizing the universal resource locator
- 29 received from the redirect server.
- 1 6. The computer program product as recited in claim 5,
- 2 wherein link attributes and associated universal resource
- 3 locators corresponding to the link attributes are
- 4 contained in a link attribute properties file which may
- 5 be accessed by a redirect server to determine the
- 6 universal resource locator for the web site associated
- 7 with the link attributes received from the recipient.

- 1 7. The computer program product as recited in claim 6,
- 2 wherein the link attribute properties file may be updated
- 3 to contain the most recent universal resource locators as
- 4 necessary.
- 1 8. The computer program product as recited in claim 6,
- 2 wherein the link attributes comprise a key and the link
- 3 attribute properties file contains key/universal resource
- 4 locator pairs allowing the redirect server to search a
- 5 key and retrieve an appropriate corresponding universal
- 6 resource locator.
- 1 9. A system for directing a recipient of an e-mail to a
- 2 web site, the system comprising:
- first means for creating an e-mail with an embedded
- 4 link, wherein the embedded link comprises a link to a
- 5 redirect server and link attributes that allow the
- 6 redirect server to determine a current web site
- 7 associated with the embedded link;
- 8 second means for sending the e-mail to a recipient;
- 9 third means for receiving the e-mail at the
- 10 recipient's data processing system;
- 11 fourth means, responsive to the recipient selecting
- 12 the embedded link, for sending link attributes from the
- 13 recipient's data processing system to the redirect
- 14 server;
- 15 fifth means for receiving the link attributes at the
- 16 redirect server;

- 17 sixth means for determining, at the redirect server,
- 18 the universal resource locator for the current web site
- 19 associated with the embedded link;
- seventh means for sending the universal resource
- 21 locator from the redirect server to the recipient; and
- 22 eighth means for retrieving, at the recipient's data
- 23 processing system, the contents from the current web site
- 24 utilizing the universal resource locator received from
- 25 the redirect server.
  - 1 10. The system as recited in claim 9, wherein link
  - 2 attributes and associated universal resource locators
  - 3 corresponding to the link attributes are contained in a
  - 4 link attribute properties file which may be accessed by a
  - 5 redirect server to determine the universal resource
  - 6 locator for the web site associated with the link
  - 7 attributes received from the recipient.
  - 1 11. The system as recited in claim 10, wherein the link
  - 2 attribute properties file may be updated to contain the
  - 3 most recent universal resource locators as necessary.
  - 1 12. The system as recited in claim 10, wherein the link
  - 2 attributes comprise a key and the link attribute
  - 3 properties file contains key/universal resource locator
  - 4 pairs allowing the redirect server to search a key and
  - 5 retrieve an appropriate corresponding universal resource
  - 6 locator.

- 1 13. A method for creating and sending an e-mail with
- 2 embedded links, the method comprising:
- 1 creating an e-mail;
- 2 embedding a link to a redirect server in the e-mail
- 3 to create an e-mail with an embedded link, wherein the
- 4 link to the redirect server comprises link attributes
- 5 enabling the redirect server to determine a current
- 6 location for a web site for which it is desired that a
- 7 recipient of the e-mail with an embedded link visit;
- 8 sending the e-mail with an embedded link to a
- 9 recipient.
- 1 14. The method as recited in claim 13, wherein the link
- 2 attributes comprises a key wherein the key corresponds to
- 3 a key maintained in a properties file which associates
- 4 web site locations with keys.
- 1 15. The method as recited in claim 14, wherein the web
- 2 site location is a universal resource locator.
- 1 16. The method as recited in claim 14, wherein the
- 2 properties file is a spreadsheet.
- 1 17. The method as recited in claim 14, wherein the
- 2 properties file is a database.
- 1 18. A computer program product in a computer readable
- 2 media for use in a data processing system for creating

- 3 and sending an e-mail with embedded links, the computer
- 4 program product comprising:
- first instructions for creating an e-mail;
- 2 second instructions for embedding a link to a
- 3 redirect server in the e-mail to create an e-mail with an
- 4 embedded link, wherein the link to the redirect server
- 5 comprises link attributes enabling the redirect server to
- 6 determine a current location for a web site for which it
- 7 is desired that a recipient of the e-mail with an
- 8. embedded link visit;
- 9 third instructions for sending the e-mail with an
- 10 embedded link to a recipient.
  - 1 19. The computer program product as recited in claim 18,
  - 2 wherein the link attributes comprises a key wherein the
  - 3 key corresponds to a key maintained in a properties file
  - 4 which associates web site locations with keys.
  - 1 20. The computer program product as recited in claim 19,
  - 2 wherein the web site location is a universal resource
  - 3 locator.
  - 1 21. The computer program product as recited in claim 19,
  - 2 wherein the properties file is a spreadsheet.
  - 1 22. The computer program product as recited in claim 19,
  - 2 wherein the properties file is a database.

- 1 23. A system for creating and sending an e-mail with
- 2 embedded links, the system comprising:
- first means for creating an e-mail;
- 2 second means for embedding a link to a redirect
- 3 server in the e-mail to create an e-mail with an embedded
- 4 link, wherein the link to the redirect server comprises
- 5 link attributes enabling the redirect server to determine
- 6 a current location for a web site for which it is desired
- 7 that a recipient of the e-mail with an embedded link
- 8 visit;
- 9 third means for sending the e-mail with an embedded
- 10 link to a recipient.
  - 1 24. The system as recited in claim 23, wherein the link
  - 2 attributes comprises a key wherein the key corresponds to
  - 3 a key maintained in a properties file which associates
  - 4 web site locations with keys.
  - 1 25. The system as recited in claim 24, wherein the web
  - 2 site location is a universal resource locator.
  - 1 26. The system as recited in claim 24, wherein the
  - 2 properties file is a spreadsheet.
  - 1 27. The system as recited in claim 24, wherein the
  - 2 properties file is a database.
  - 1 28. A method for retrieving a web site associated with a
  - 2 link in an e-mail, the method comprising:

- 3 receiving an e-mail with an embedded link;
- 4 responsive to selection of the embedded link by a
- 5 user; sending link attributes contained in the embedded
- 6 link to a redirect server indicated by the embedded link;
- 7 receiving a web site location from the redirect
- 8 server; and
- 9 retrieving content from the web site location.
- 1 29. The method as recited in claim 28, wherein the link
- 2 attributes comprise a key.
- 1 30. A computer program product in a computer readable
- 2 media for use in a data processing system for retrieving
- 3 a web site associated with a link in an e-mail, the
- 4 computer program product comprising:
- first instructions for receiving an e-mail with an
- 6 embedded link;
- 7 second instructions, responsive to selection of the
- 8 embedded link by a user; for sending link attributes
- 9 contained in the embedded link to a redirect server
- 10 indicated by the embedded link;
- 11 third instructions for receiving a web site location
- 12 from the redirect server; and
- fourth instructions for retrieving content from the
- 14 web site location.
  - 1 31. The computer program product as recited in claim 30,
  - 2 wherein the link attributes comprise a key.

- 1 32. A system for retrieving a web site associated with a
- 2 link in an e-mail, the system comprising:
- 3 first means for receiving an e-mail with an embedded
- 4 link;
- 5 second means, responsive to selection of the
- 6 embedded link by a user; for sending link attributes
- 7 contained in the embedded link to a redirect server
- 8 indicated by the embedded link;
- 9 third means for receiving a web site location from
- 10 the redirect server; and
- fourth means for retrieving content from the web
- 12 site location.
  - 1 33. The system as recited in claim 32, wherein the link
  - 2 attributes comprise a key.
  - 1 34. A method for redirecting an e-mail recipient to a
  - 2 current location of a web site associated with a link
  - 3 embedded in the e-mail, the method comprising:
  - 4 receiving link attributes from a recipient;
  - 5 determining a location for the web site associated
  - 6 with the link attributes;
  - 7 sending the location for the web site associated
  - 8 with the link attributes to the recipient.
  - 1 35. The method as recited in claim 34, wherein
  - 2 determining a location for the web site associated with
  - 3 the link attributes comprises consulting a link attribute
  - 4 file that contains attribute location pairs.

- 1 36. The method as recited in claim 34, wherein the link
- 2 attributes comprise a key.

v 4, 8

- 1 37. The method as recited in claim 34, wherein the web
- 2 site location comprises a universal resource locator.
- 1 38. The method as recited in claim 35, wherein the link
- 2 attribute file is a spreadsheet.
- 1 39. The method as recited in claim 35, wherein the link
- 2 attribute file is a database.
- 1 40. A computer program product in a computer readable
- 2 media for use in a data processing system for redirecting
- 3 an e-mail recipient to a current location of a web site
- 4 associated with a link embedded in the e-mail, the
- 5 computer program product comprising:
- first instructions for receiving link attributes
- 7 from a recipient;
- 8 second instructions for determining a location for
- 9 the web site associated with the link attributes;
- 10 third instructions for sending the location for the
- 11 web site associated with the link attributes to the
- 12 recipient.
- 1 41. The computer program product as recited in claim 40,
- 2 wherein determining a location for the web site
- 3 associated with the link attributes comprises consulting

- 4 a link attribute file that contains attribute location
- 5 pairs.

**4** •ስ• *ት*`

- 1 42. The computer program product as recited in claim 40,
- 2 wherein the link attributes comprise a key.
- 1 43. The computer program product as recited in claim 40,
- 2 wherein the web site location comprises a universal
- 3 resource locator.
- 1 44. The computer program product as recited in claim 41,
- 2 wherein the link attribute file is a spreadsheet.
- 1 45. The computer program product as recited in claim 41,
- 2 wherein the link attribute file is a database.
- 1 46. A system for redirecting an e-mail recipient to a
- 2 current location of a web site associated with a link
- 3 embedded in the e-mail, the system comprising:
- 4 first means for receiving link attributes from a
- 5 recipient;
- 6 second means for determining a location for the web
- 7 site associated with the link attributes;
- 8 third means for sending the location for the web
- 9 site associated with the link attributes to the
- 10 recipient.
  - 1 47. The system as recited in claim 46, wherein
  - 2 determining a location for the web site associated with

- 3 the link attributes comprises consulting a link attribute
- 4 file that contains attribute location pairs.
- 1 48. The system as recited in claim 46, wherein the link
- 2 attributes comprise a key.
- 1 49. The system as recited in claim 46, wherein the web
- 2 site location comprises a universal resource locator.
- 1 50. The system as recited in claim 47, wherein the link
- 2 attribute file is a spreadsheet.
- 1 51. The system as recited in claim 47, wherein the link
- 2 attribute file is a database.
